Messages, Signs, and Meanings Marcel Danesi 2004 Messages, Signs, and Meanings can be used directly in introductory courses in semiotics, communications, media, or culture studies. Additionally, it can be used as a complementary or supplementary text in courses dealing with cognate areas of investigation (psychology, mythology, education, literary studies, anthropology, linguistics). The text builds upon what readers already know intuitively about signs, and then leads them to think critically about the world in which they live - a world saturated with images of all kinds that a basic knowledge of semiotics can help filter and deconstruct. The text also provides opportunities for readers to do "hands-on" semiotics through the exercises and questions for discussion that accompany each chapter. Biographical sketches of the major figures in the field are also included, as is a convenient glossary of technical terms. The overall plan of the book is to illustrate how message-making and meaning-making can be studied from the specific vantage point of the discipline of semiotics. This third edition also includes updated discussions of information technology throughout, focusing especially on how meanings are now negotiated through such channels as websites, chat rooms, and instant messages.

Human Rights and Intellectual Property Laurence R. Helfer 2011-03-07 This book explores the interface between intellectual property and human rights law and policy. The relationship between these two fields has captured the attention of governments, policymakers, and activist communities in a diverse array of international and domestic political and judicial venues. These actors often raise human rights arguments as counterweights to the expansion of intellectual property in areas including freedom of expression, public health, education, privacy, agriculture, and the rights of indigenous peoples. At the same time, creators and owners of intellectual property are asserting a human rights justification for the expansion of legal protections. This book explores the legal, institutional, and political implications of these competing claims: by offering a framework for exploring the connections and divergences between these subjects; by identifying the pathways along which jurisprudence, policy, and political discourse are likely to evolve; and by serving as an educational resource for scholars, activists, and students.

Schutz 2011-03-21 This book is about the causes and consequences of economic inequality in the advanced market economies of today. It is common that in market systems people choose their own individual economic destinies, but of course the choices people make are importantly determined by the alternatives available to them: unequal opportunity is the critical determinant of economic disparities. This begs the question; from where do the vast inequalities of opportunity arise? This book theorizes that power and social class are the real crux of economic inequality. Most of mainstream economics studiously eschews questions involving social power, preferring to focus instead on "individual choice subject to constraint" in contexts of "well-functioning markets". Yet both "extra-market" power structures and power structures arising from within the market system itself are unavoidably characteristic of real-world market-based economies. The normal working of labor and financial markets engenders an inherent wealth-favoring bias in the distribution of opportunities for occupational choice. But that bias is greatly compounded by the economic, social, political and cultural power structures that constitute the class system. For those power structures work to distribute economic benefit to class elites, and are in turn undergirded by the disparities of wealth they thus help engender. Inequality and Power offers an economic analysis of the power structures constituting that class system: employers' power over employees; the power of certain businesses over others; professionals' power over their clients and other employees; cultural power in the media and education systems; and political power in "democratic" government. Schutz argues that a "class analysis" of the trend of increasing economic inequality today is superior to the mainstream economic analysis of that trend. After considering what is wrong with power-based inequality in terms of criteria of distributive justice and economic functionality, the book concludes with an outline of various possible correctives. This book should be of interest to students and researchers in economics, sociology, political science and philosophy, as well as anyone interested in the theories of social class.

Marginalised Communities in Higher Education Neil Harrison 2021

"Drawing on examples from nine countries across five continents, this book offers anyone interested in the future of higher education the opportunity to understand how communities become marginalised and how this impacts on their access to learning and their ability to thrive as students. Focusing on groups that suffer directly through discriminatory practices or indirectly through distinct forms of sociocultural disadvantage, this book brings to light communities about which little has been written and where research efforts are in their relative infancy. Each chapter documents the experiences of a group and provides insights that have a wider reach and gives voice to those that are often unheard. The book concludes with a new conceptualisation of the social forces that lead to marginalisation in higher education. This cutting-edge book is a must read for higher education researchers, policy makers, and students interested in access to education, sociology of education, development studies, and cultural studies"--

The Arthur of the North Marianne E. Kalinke 2015-11-20 The Arthur of the North is the first book-length study of the Arthurian literature that was translated from French and Latin into Old Norse-Icelandic in the thirteenth century, which has been preserved mostly in Icelandic manuscripts, and which in early modern times inspired the composition of narrative poems and chapbooks in Denmark, Iceland and Norway, chiefly of the Tristan legend. The importation of Arthurian literature in the North, primarily French romances and *lais*, is indebted largely to the efforts of King Hákon Hákonarson (r. 1217–63) of Norway, who commissioned the translation of Thomas de Bretagne's *Tristan* in 1226, and subsequently several Arthurian romances by Chrétien de Troyes and a number of Breton *lais*. The translations are unique in that the French metrical narratives were rendered in prose, the traditional form of narrative in the North. The book concludes with a chapter on Arthurian literature in the Rus' area, precisely East Slavic, with a focus on the Belarusian *Trysčan*.
