Writing Math Research Papers - 5th Ed. Robert Gerver 2017-12-01 Mathematics research papers provide a forum for all mathematics enthusiasts to exercise their mathematical experience, expertise and excitement. The research paper process epitomizes the differentiation of instruction, as each student chooses their own topic and extends it as far as their motivation and desire takes them. The features and benefits of the research paper process offer a natural alignment with all eight Common Core State Standards for Mathematical Practice. Writing Math Research Papers serves both as a text for students and as a resource for instructors and administrators. The Writing Math Research Papers program started at North Shore High School in 1991, and it received the 1997 Chevron Best Practices in Education Award as the premier high school math course in the United States. Author Robert Gerver’s articles on high school mathematics research programs were featured in the National Council of Teachers of Mathematics publication Developing Mathematically Promising Students, the NCTM’s 1999 Yearbook, Developing Mathematical Reasoning in Grades K – 12, and in the September 2017 issue of the Mathematics Teacher.

Information and Knowledge Management Timothy W. Finin 1993-11-10 This volume contains expanded and updated versions of papers presented at CIKM 92, the First International Conference on Information and Knowledge Management, held in Baltimore, Maryland, in November 1992. The conference participants came from the fields of database management, information retrieval, and artificial intelligence. A major theme in the volume is how these fields are merging and enriching each other. Theeight papers discuss: discovering context in a conceptual schema; a system for face information retrieval; queries in OODB systems; consistency checking in OODBs; integrity constraints representation in OODBs; a framework for temporal object databases; inductive dependencies and approximate databases; OODB design methodologies.

Asking the Right Questions about Schools John Chrysostom Dougherty 2002 Parents who want to be more involved in their child’s education, who want to be aware of what their child should be learning, and who want to be an informed part of the education process, need to read this book. The first half of the book guides parents into an understanding of what a good education should look like—what skills and content children should learn, and the characteristics of a successful school. The second half is an action guide for improving education—keeping children from academic failure, raising standards, improving school safety, classroom teaching, and academic accountability. Each chapter stands alone, and together, the result is a handbook for the informed parent.

Teaching Formal Methods Jeremy Gibbons 2009-10-26 This volume contains the proceedings of TFM2009, the Second International FME Conference on Teaching Formal Methods, organized by the Subgroup of Education of the Formal Methods Europe (FME) association. The conference took place as part of the 7rst Formal Methods Week (FMWeek), held in Ei- hoven, The Netherlands, in November 2009. TFM2009 was a one-day forum in which to explore the successes and fa- ures of formal method (FM) education, and to promote cooperative projects to further educationand training in FMs. The organizersgatheredlecturers,tea- ers,andindustrialpartnersto discusstheir experience,presenttheir pedagogical methodologies, and explore best practices. Interest in FM teaching is growing. TFM2009 followed in a series of events on teaching FMs which includes two BCS-FACS TFM workshops (Oxford in 2003, and London in 2006), the TFM2004 conference (Ghent, 2004, with p- ceedings published as Springer LNCS Volume 3294), the FM-Ed 2006 workshop (Hamilton, co-located with FM2006), FORMED (Budapest, at ETAPS2008), and FMET2008 (Kitakyushu, co-located with ICFEM2008). FMs have an important role to play in the development of complex c- puting systems—a role acknowledged in industrial standards such as IEC61508 and ISO/IEC15408, and in the increasing use of precise modelling notations, semantic markup languages, and model-driven techniques. There is a growing need for software engineers who can work e?ectively with simple, mathematical abstractions, and with practical notions of inference and proof.

Keepers of the American Dream Christine E. Sleetter 2012-06-14 This book reports an ethnographic study of thirty teachers from eighteen schools who participated in a staff development programme in multicultural education. The study examines how multicultural education was actually presented to teachers, and areas in which their classroom teaching and perception of students changed over the two-year period. Although most of the teachers reported learning a good deal, changes in their teaching and their discussions of teaching were fairly limited. After reporting the data, the book examines why changes were limited, analyzing three areas: the nature of staff development and how multicultural education was packaged; the structure of schools as institutions; and the identities and life experiences of teachers as White women, often from working class backgrounds.

More Trouble with Maths Steve Chinn 2016-07-21 More Trouble with Maths acknowledges that there are many reasons why children and adults are unable to function mathematically. Difficulties include problems with rote learning basic facts and procedures, debilitating anxiety, poor working and short-term memories and mathematics vocabulary. Central to this new edition is a range of standardised tests and diagnostic activities, including a 15 minute test of basic mathematics, a thinking style test, tests of basic fact retrieval and maths anxiety. Guiding the reader in the interpretation of tests, this new edition shows how identifying the barriers to learning is the first step in a programme of intervention. Written in an engaging and user-friendly style, Steve Chinn draws on his extensive experience and expertise to: show how to consider and appraise the many factors relating to mathematical learning difficulties explain how these factors can be investigated explore their impact on learning mathematics. Emphasising the need for a clinical approach when assessing individuals, this book shows how diagnosis and assessment can become integrated into everyday teaching. This highly practical and relevant resource is a crucial resource for anyone who wants to accurately and effectively identify the depth and nature of mathematical learning difficulties and dyscalculia.

On Evaluating Curricular Effectiveness National Research Council 2004-11-12 This book reviews the evaluation research literature that has accumulated around 19 K-12 mathematics curricula and breaks new ground in framing an ambitious and rigorous approach to curriculum evaluation that has relevance beyond mathematics. The committee that produced this book consisted of mathematicians, mathematics educators, and methodologists who began with the following charge: Evaluate the quality of the evaluations of the thirteen National Science Foundation (NSF)-supported and six commercially generated mathematics curriculum materials; Determine whether the available data are sufficient for evaluating the efficacy of these materials, and if not; Develop recommendations about the design of a project that could result in the generation of more reliable and valid data for evaluating such materials. The committee collected, reviewed, and classified almost 700 studies, solicited expert testimony during two workshops, developed an evaluation framework, established dimensions/criteria for three methodologies (content analyses, comparative studies, and case studies), drew conclusions on the corpus of studies, and made recommendations for future research.
