Learning Microbiology Through Clinical Consultation General Practitioner Berenice Langdon 2016-08-30 An understanding of microbiology is an essential part of the medicine curriculum and key knowledge for a working doctor. Learning Microbiology through Clinical Consultation presents medical students and newly qualified doctors with a wealth of case scenarios for developing understanding of microbiology in the practice setting. Spanning 14 categories of infection, the cases within the book let the reader listen-in to clinical consultations with patients exhibiting an array of symptoms, and allow them to observe the examination and specimen taking techniques, hear what advice should be given, and how the consultation can be drawn to a close. The swabs taken in the story and the results obtained provide a clear link to the more technical information on microbiology which is then discussed. By this means each topic is embedded in clinical practice, with the relevant microbiological information being brought to the fore. By integrating the underlying science of microbiology, the symptoms presented by the patients, the consultation process, and information about the key microbes commonly associated with each infection, the book is ideal to use on a problem-based, systems-based course, or for a newly qualified doctor practicing independently. Learning Microbiology through Clinical Consultation is a highly accessible text that describes the basic science of microbiology within the practice setting in an insightful and informative way. It is not only an ideal resource for medical students and newly qualified doctors, but one that is relevant to anyone contemplating studying medicine or preparing for medical school interviews.

Laparoscopic Gastrectomy for Cancer Seigo Kitano 2012-07-16 The first laparoscopy-assisted gastrectomy for gastric cancer was performed in Japan in 1991. In the ensuing 20 years, at first through a process of trial and error, then through the sharing of master surgeons' accumulated experience, the procedure has been honed and refined to its current high level. From the beginning, it soon became evident that this much less invasive form of gastrectomy, in comparison with traditional open surgery, led to improved quality of life for postsurgical patients, and use of the procedure spread rapidly among gastric surgeons. Early on, however, there were calls for the establishment of standard techniques and procedures to be followed, with a recognized need to improve the level of safety and the quality of lymph node dissection for local

control in cancer treatment. Toward that end, the Laparoscopy-Assisted Gastrectomy Club was formed in 1999. In the following year, because both Japan and Korea experience a high rate of gastric cancer, specialists from those two nations came together to form the Japan-Korea Laparoscopic Gastrectomy Joint Seminar, to facilitate and encourage the exchange of vital information. The result has been to achieve an evolving consensus among specialists in the field of endoscopic surgery in Japan and Korea with expertise that can be shared worldwide. A compilation of the current state-of-the-art is now presented in this volume, with accompanying DVD, which will be of great value to all endoscopic surgeons who perform laparoscopic gastrectomy.
